CLOUD-BASED LOGISTICS & FLEET MANAGEMENT SYSTEM

(Digitizing Manual Ledger & "Hisab Kitab" for Trucking Operations)

SUBMITTED BY:

Syed Zaid Ur Rehman

Registration No: S23BINFT1E02072

SUPERVISED BY:

Dr Munawar Ahmad

DEPARTMENT OF INFORMATION TECHNOLOGY

FACULTY OF COMPUTING

THE ISLAMIA UNIVERSITY OF BAHAWALPUR

SESSION: 2023–2027

VERSION: 1.0

DATE OF SUBMISSION: May 01, 2026

1. Introduction

1.1 Purpose

The purpose of this Software Requirements Specification (SRS) is to provide a comprehensive technical overview of the Cloud-Based Logistics & Fleet Management System. This document serves as the primary technical guide for developing a digital solution to replace manual paper-based bookkeeping for a transport business managing 35-40 vehicles.

1.2 Project Scope

The system will provide a centralized platform for managing fleet operations. It will specifically target the "Hisab Kitab" (Accounting) challenges by automating trip expenses, driver payouts, and revenue tracking using the TALL stack and Filament PHP.

2. Overall Description

2.1 Product Perspective

This system is a standalone web application designed to digitize manual registers. It utilizes **Filament PHP v4** to provide a high-performance administrative interface, ensuring that data entry is as fast as writing by hand but with the added benefit of automated calculations.

2.2 User Classes and Characteristics

- **Super Admin (Business Owner):** Has full visibility of the financial health of the business, including net profit and loss reports.
- **Fleet Manager (Staff):** Responsible for the day-to-day entry of truck assignments, fuel records, and consignment details.

3. Functional Requirements

3.1 Fleet and Driver Management

- **FR-1: Vehicle Database:** The system must allow for the registration of 40+ trucks, storing Plate Numbers, Engine Numbers, and fitness certificate dates.
- **FR-2: Driver Profiles:** The system must maintain records of all drivers, including their contact information and license validity.

3.2 Trip Booking and Tracking

- **FR-3: Consignment Entry:** Users must be able to record new shipments, including client names, destination, and the agreed-upon freight rate.
- **FR-4: Trip Status Monitoring:** The system shall track the live status of each trip (e.g., Pending, In Transit, Delivered, Paid).

3.3 Financial Ledger (The "Hisab" Engine)

- **FR-5: Expense Logging:** For every trip, the system must allow for the entry of specific costs: Fuel, Tolls, Maintenance, and "Kharcha" (Daily Allowances).
- **FR-6: Revenue Tracking:** The system shall track payments received from clients versus outstanding balances.
- **FR-7: Automated Calculations:** The system must automatically calculate the net profit per trip:

$$Net Profit = Total Revenue - (Fuel + Driver Expenses + Maintenance)$$

- **FR-8: Driver Payroll:** The system shall calculate driver commissions or fixed salaries based on completed trip history.

4. External Interface Requirements

4.1 User Interfaces

The system will feature a responsive web interface designed with **Tailwind CSS**, ensuring it is accessible on mobile devices for managers in the field. **Livewire** will be used to provide a "Single Page Application" feel, allowing for instant data validation during "Hisab" entry.

4.2 Software Interfaces

- **Operating System:** Cross-platform (Windows, Linux, macOS via Browser).
- **Database Interface:** MySQL for secure and relational data storage.
- **Backend Framework:** Laravel 11.

5. Non-Functional Requirements

5.1 Accuracy and Precision

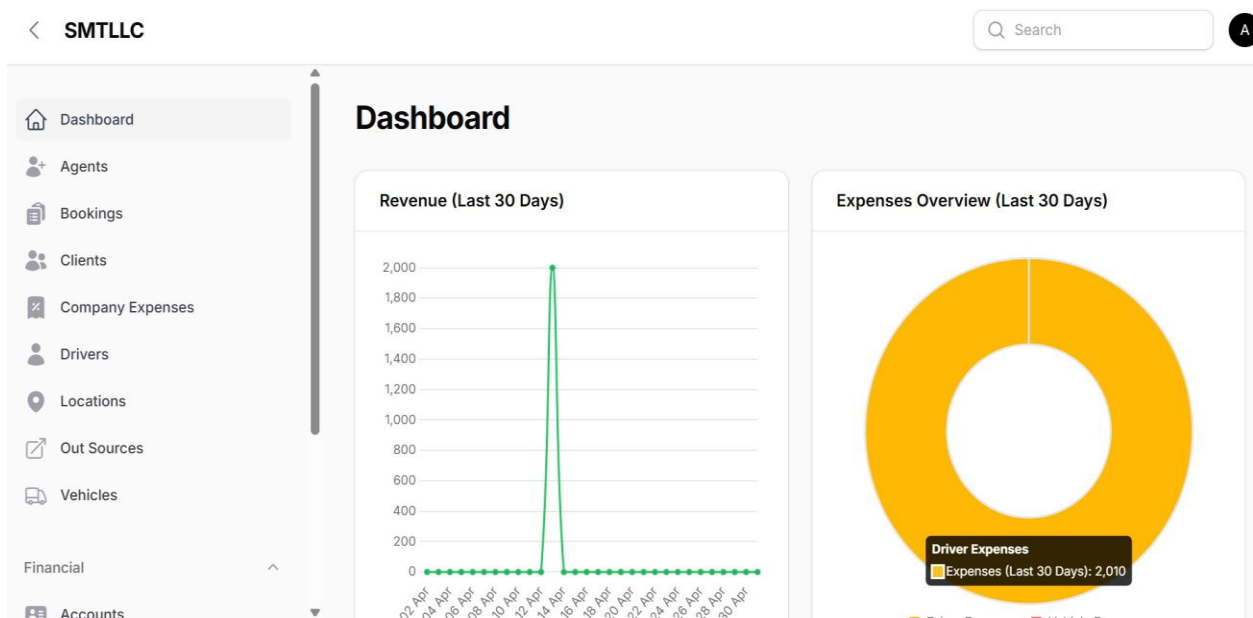

Since the system handles financial "Hisab," all numerical calculations must be 100% accurate, supporting decimal precision for fuel and currency values.

5.2 Security

The system will use Laravel's built-in authentication and authorization protocols to ensure that only authorized staff can access financial records.

5.3 Reliability and Backup

The system must be capable of daily database backups to ensure that no historical "Hisab" records are lost due to technical failure.
